MICROSOFT

Issues with Outlook 2000 SR1a:

1. The LDAP issue—user in "Corp Mode" could not receive a certificate from another directory via LDAP:

   - 5/26/00: The update for this issue is now in and has been successfully tested. This fix will likely be released as a QFE /hotfix. Due to issues surrounding current virus activities in the industry, our Outlook Team has been working on a "security update" for Outlook. (more information is available at www.microsoft.com/outlook). Our LDAP QFE will be released shortly after we release this patch (as it has taken priority with our Outlook Team).

2. The CRL issue—Outlook not performing proper CRL checking:

   - 5/26/00: The update for this issue is now in and has been successfully tested. This will be released in a few weeks. For Windows 2000 users, the fix will be in Windows 2000 SP1 (due for release approx. in mid-June). (Note: this fix is not in the current SP1 Beta). For NT4/Win9x users, the fix will be in IE 5.01 SP1 and IE 5.5 (both due for release approx. in mid-June). It is your choice as to which to install.
